

We are one of only a few companies in this field that manufactures evacuated-tube solar collectors in Europe, in our filial company Ligas in Liberec. Thanks to that, we can offer tube collectors of excellent parameters and in stable quality, verified by ISO 9001:2001 audits.

A filial company named Regulus Technik was founded in 1997 in Prešov, Slovakia, that represents us on the markets in Slovakia and Ukraine. Export to other countries is organized from the Prague Headquarters.

HEATING TECHNOLOGY *for renewable energy sources*

For our business partners we organize specialized trainings that offer detailed technical info on our range of products, advice how to design systems with alternative energy sources, our practical experience and documents for the trainees own activities. Our experienced technicians are still at your disposal for consultations or designing systems with alternative energy sources. We know that our service is not over with your first order, it is just the beginning!

Regulus was founded in 1992 in Prague. Since then, a steady, purely Czech-owned company has been built that employs (together with its 2 filial companies) almost 100 excellent specialists and highly-qualified workers.

We offer effective solutions for space and DHW heating in many various standard and tailor-made variants using alternative energy sources. Our designs are always based on serious calculations and long-term experience, bringing long-term savings to our customers and pollution emission reduction to our nature and all of us.

Regulus ranks among the most significant Czech companies in the sphere of utilizing renewable energy sources for space and DHW heating. Besides the Czech and Slovak markets we have more and more customers in many European and non-European countries (Italy, Spain, France, Germany, Switzerland, the Netherlands, UK, Ireland, Sweden, Poland, Hungary, Romania, Serbia, Montenegro, Bulgaria, Russia, the Baltic States, USA, Uruguay, Algeria...) and our export volume keeps growing.

We use our long-time experience for developing our own products that best meet the needs of our customers. Some of our products are even protected by domestic and foreign patents. Our long-term cooperation with Ligas, a Czech manufacturer of gas boilers, has resulted in Ligas becoming a 100% filial company of Regulus, manufacturing our products instead of gas boilers.

Our sophisticated warehouse system guarantees permanent availability of all kinds of items in sufficient quantity. We are able to dispatch promptly even large orders. Our team of experts is ready to offer you technical support and assistance in projects also for individual large applications with alternative energy sources.
