

CLEANING SOLUTIONS FOR HEATING SYSTEMS

BP 800

Cleaning anti-corrosion fluid for older heating and A/C systems that cleans heat-transfer surfaces from sediments of metal oxides and sludge that cleans, lubricates and restores proper circulation. It facilitates formation of protective coating and can be used for all metal materials incl. aluminium.

TECHNICAL DATA

STATE	liquid
COLOUR	opalesque
ODOUR	characteristic
pH	7
DOSAGE	1l of product for 100l of fluid in system

PACKAGING

Bottle, 1l	Code - 18948
------------	--------------

APPLICATION

First drain the system and fill it with plain water. Add 1l of the product for each 100l of heating water.

If the system is heavily contaminated, a higher dose might be necessary.

Let the solution circulate in the circuit using a (descaling) circulation pump for about 45 min.

It is recommended to fill the circuit with clean water after cleaning, if needed, add BP 100 or BP 700A that will form a protective layer, preventing deposition of calcareous sediments and corrosion.
