Service Valves for expansion vessels

For an easy expansion vessel pressure check. No need to drain a system for maintenance.

Main advantages:

- » Easy installation
- » Safety shutoff ball valve
- » Integrated drain valve

Codes: 8770 - G 3/4"

8770 - G 3/4" connection fittings 12295 - G 1" connection fittings 14492 - G 6/4" connection fittings

for heating systems, solar thermal systems and systems with DHW heating

Wall Mount Expansion Vessel Brackets

Multipurpose mounting arm. Code 10046.

It is fitted with the following threaded connections: G 3/4" F to connect an expansion vessel, G 3/4" M to connect to a heating system, G 3/8" F for an automatic air vent valve, G 1/2" M for a safety valve and G 1/4" F for a pressure gauge.

Expansion vessel bracket and connection kit. *Code 7766.* Connection fittings (G ³/₄" MF) with a double check valve, permitting quick and safe expansion vessel disconnection without leaks.

Replaceable Bladders

For bigger expansion vessels, the inner elastic bladder can be replaced.

Codes of replaceable bladders by model and volume.

Expansion Vessels

Energy-saving solutions

Pressure expansion vessels are designed to compensate for fluid volume changes caused by temperature changes, and to keep the system pressure within the necessary limits. They are used in heating systems, solar thermal systems and drinking water circuits when hot water heaters are installed in the system.

Aquafill Expansion Vessels

High-quality steel vessels are coated with anticorrosion surface layer, with a non-permeable highly elastic bladder, resistant to high temperatures. The bladder can be replaced in vessels of 50l volume and bigger.

All the expansion vessels are 100% tested and certified to the PED Directive (97/23 EC).

HS Expansion vessels are designed to be installed in heating systems or in sealed cooling circuits, permitting to absorb heating fluid volume fluctuations caused by its temperature changes.

SL Expansion vessels are designed to be installed in solar thermal systems.

HW Expansion vessels are designed to be installed in systems with DHW heating. Besides the volume fluctuations they also absorb water hammers, extending the service life and increasing the reliability of both hot water tanks and the entire system.
