

CHEMICALS FOR BOILER CLEANING AND MAINTENANCE

ALU CLEANER

Two-step cleaning product designed for cleaning aluminum combustion chambers in condensing gas boilers, containing corrosion inhibitors, suitable also for aluminum alloy heat exchangers. After application of the A product, treatment with the B product shall follow unconditionally.

TECHNICAL DATA

STATE	liquid
COLOUR	pale yellow
ODOUR	strong

PACKAGING

2 plastic containers, 10 kg each	Code - 13249
----------------------------------	--------------

APPLICATION

ALU CLEANER A - strong alkaline (pH 13)

Spray an ample amount of the product on the fouled surface using a suitable spray gun. Let it act for 5-15 minutes depending on the degree of contamination. Pressure wash thoroughly. In case of a heavily fouled surface, repeat the procedure. Continue with the application of Alu Cleaner B after the last washing.

ALU CLEANER B - strong acid (pH < 2)

Alu Cleaner B shall be applied only after treatment with Alu Cleaner A. Using a suitable spray gun, spray an ample amount of the product on the surface already treated with the A product so that the entire surface is wet. Let it act for 2-5 minutes depending on the degree of contamination. Wash thoroughly with water.
