

**0-10V to PWM Module for IR 12**

Main features	
Description	add-on module for IR 12
Application	transforms the 0-10V signal from IR 12 to PWM signal with 10V voltage level (to control circulation pumps in heating and solar thermal systems)
Signalizace	control range 0-10 V - when energized, the LED will flash twice - proper funkction → LED flashing once every 5 s.
Code	12860

Technical data	
Power supply	
Power voltage	24V ss ±10% (power supply for IR 12)
Max. power input	0,75 W
Input	
Control signal	0-10V from IR 12 controller
Output	
PWM signal	with duty cycle 0-100%, 23.4 V

**Module wiring**
