

RTC 20e Air-to-Water Heat Pump

Main Features

Application	Heating/cooling, DHW heating.
Description	In the heating/DHW mode, the heat pump extracts energy from the ambient air (at an outdoor temperature as low as -25 °C) and transfers it into heating water; its flow temp. may reach up to 55 °C. In the cooling mode, the heat pump draws heat from the cooling water (at an ambient air temperature up to 43 °C); its temperature at the heat pump outlet may be as low as 5 °C. The heat pump is equipped with a variable speed compressor.
Working fluid	R32 (cooling circuit), water (heating circuit).
Installation	The heat pump shall be installed with a pump station and a controller (for codes see the Catalogue).
Code	19439

(*) For heat pump space heaters and heat pump combination heaters, the rated heat output P_{rated} is equal to the design load for heating P_{design}, and the rated heat output of a supplementary heater P_{sup} is equal to the capacity for heating sup(T_j).

(**) If C_{dh} is not determined by measurement then the default degradation is C_{dh} = 0.9.
